DERMIGEL ROSACEA®

A long time expected
INNOVATION in skin care

DERMIGEL ROSACEA® helps fight and control various disturbing skin problems such as broken capillaries, blotchy skin conditions, Rosaceae, redness, dull skin, dark circles under the eyes...etc.

DERMIGEL ROSACEA® acts by inhibiting the enzymatic activity of metallo-proteinases in the matrix which destroy the skin Collagen network.

With age, stressful lifestyle or harsh climatic conditions, the activity of these enzymes increases resulting in irreparable damages to the skin. In order to help the skin maintain a healthy biological stability, as well as its beauty, it is important to preserve an equilibrium between these enzymes and their natural inhibitors. This is the role of **DERMIGEL ROSACEA®**.

DERMIGEL ROSACEA® contains active ingredients that help :

- Increase dermis resistance to aging, stress or environmental factors.
- Decrease the appearance of broken capillary vessels.
- Decrease blotchy skin appearance.
- Fight Rosaceae.

Night time, on a cleansed skin, apply a thin layer of **DERMIGEL ROSACEA®** on affected areas. Massage gently until completely absorbed. Avoid contact with eyes.
