DERMOCÉANE®

For youthful skin and healthy appearance
An outstanding CONCEPTION and realisation

DERMOCÉANE® is a unique preparation containing moisturizing agents to abound water into the skin insuring elasticity and suppleness, antioxidants to protect the skin against premature aging and restorative ingredients to stimulate cell renewal.

DERMOCÉANE® is a refined gel that penetrates into the skin instantly reducing rapidly the appearance of fine lines and minor skin imperfections.

Particularly recommended for flabby skin showing premature aging signs, **DERMOCÉANE®** functions exactly where needed for a younger looking skin and helps correct the damages created by free radicals.

Morning and night time, on a cleansed skin, apply a thin layer on strategic areas of face and neck. Insist on the eye contour, the fine lines around the lip area and between eyebrows.

In cabin, **DERMOCÉANE®** may be used with the high frequency or a thermal mask for a deeper impact.

Recommend without hesitation **DERMOCÉANE®** to your customers to help them beat the effects of age.
