ÉLASTINE PLUS®

Serum COLLAGEN & ELASTIN

Two REMARKABLE
Skin Care Products

ÉLASTINE PLUS® cream is an unctuous emulsion with a delicate floral fragrance containing robane, collagen, elastin, ceramides, allantoin, beeswax and moisturizing agents. These natural stimulating substances help the skin to maintain its regenerating functions. This outstanding day and night cream protects, nourishes, smooths, moisturizes, revitalizes and helps to prevent the appearance of wrinkles. The ceramides in this cream are used as a carrier of collagen and elastin. They counteract the action of elastase, the enzyme which destroys these molecules.

The **COLLAGEN & ELASTIN** serum is a transparent concentration of soluble collagen and elastin, two important constituents of the dermic and conjunctive tissues. Rapidly absorbed by the skin, this serum reinforces the skin elasticity, helping it to maintain its natural beauty and youth, delaying the appearance of premature wrinkles.
